

GPCG funded IM/IT Projects 2001

The General Practice Computing Group and the Department of Health and Ageing selected a number of general practice informatics projects for funding in 2001. The following document is a report from one of these projects. All reports can be found on the GPCG Website at <http://www.gpcg.org/projects>

Disclaimer

The General Practice Computing Group (GPCG) presents the report of the following project for the purpose of disseminating GP informatics information free of charge for the benefit of stakeholders and the public. It has been prepared by a third party and does not necessarily represent the views of the GPCG or the Department of Health and Ageing (DoHA). DoHA holds intellectual property rights over this document.

All reports are covered by the GPCG disclaimer, which can be found at <http://www.gpcg.org/disclaimer>

Trials of IM/IT clinical integration activities in General Practice

Project #05

SHARED DIABETES CARE IN GENERAL PRACTICE.

SUMMARY.

We present a set of GEHR archetypes of clinical referral messages associated with the care of patients with diabetes, as well as a message set in HL7. In these messages we have indicated mandatory elements of the message. These represent a minimum set of messages that are required for communication between GPs and other providers of diabetes care. Our message set complements the message set that another group has developed for messages between GPs and Divisions for purposes of data collection in diabetes care. In presenting this report, we acknowledge that it should be submitted to criticism and debate and will probably require revision in the future. Indeed, the ultimate arbiters of the archetype may be within the Open EHR foundation; and the HL7 message set specification will require review by Standards Australia. A series of footnotes identifies areas of controversy and, in particular, areas that require comment from Standards Australia for standardisation of use of segments. There is also the need for development of codes to suit HL7 segments, such as allergies or patient-entered data.

BACKGROUND.

Diabetes mellitus is a pandemic non-transmissible chronic disease with disabling complications that are difficult to treat. Specialist care of all diabetic patients is not feasible. The strong preventive philosophy of its management makes it well suited to management in the primary sector by general practitioners. However, it has been demonstrated that GP management is only satisfactory if systematic. Thus longitudinal data records are essential and good diabetes management requires booked appointments rather than ad hoc care. This, plus essential and repeated referrals to medical specialists and allied health professionals, makes long term diabetes care extremely complex. Computer systems to support this pattern of care are highly desirable; and transmission of data between different sites and systems will be an essential requirement.

In Australia, the Health Level 7 messaging protocol (HL7) has been recommended as a national standard. This protocol originated in the USA and has been developed cooperatively with representatives of other countries. Prominent among these is Australia, which participates in HL7 development under the banner of Standards Australia.

There are three drawbacks in the message sets required for diabetes management. First of all, the HL7 protocol has its origins in administrative aspects of health care and is not well suited to complex clinical messages. Secondly, the range of clinical messages required in diabetes care is very large, because of the complexity of the disease. While this makes it a good paradigm for testing concepts in messaging and decision support, it leads to a set of messages that require reciprocity between sending and receiving facility. Third, reality and common sense dictate that diabetes care programs must interact closely with standard general practice record systems.

These latter requirements have led us to consideration of the Good Electronic Health Record architecture as a means of resolving the difficulties. In this architecture, an object linked data base is used instead of a relational data base. A form of middleware known as a "GEHR kernel" is used to pass data from clinical interfaces to the data base. The kernel has a standardised interface that allows more than one clinical application to share a common set of data stored in the data base. Clinical concepts or measurements can be shared and transmitted in a fashion that is mutually acceptable to receiving and sending programs by the use of archetypes. Archetypes are a series of concepts of clinical observations and diagnoses that have been developed by panels of

experts. By storing these externally in reference servers, one makes them available to a variety of receiving and sending systems. This not only creates the opportunity for compatibility between systems at different sites, but also between different clinical applications at one site.

Archetypes exist for recording clinical concepts and for recording observations. However, archetypes are also needed for describing the format of transmitted messages. A diabetes referral is a complex message: we set out to establish archetypes for this type of message.

THE SCOPE OF THIS PROJECT.

Shortly after commencement of this project, we were contacted by Peter MacIsaac, from the General Practice Section of the Commonwealth Dept of Health and Family Services, and by Gawaine Powell-Davies of the Centre for General Practice Integration Studies. The CGPIS had obtained a similar grant from the GPCG and it was agreed that we should liaise in order to create complementary, rather than overlapping, solutions.

To improve this liaison, Dr W Braund from MCA took part in steering committee meetings of the CGPIS group. Furthermore Ms Jane Taggart of the CGPIS was one of the participants in the meeting conducted by MCA in Adelaide to address the messaging solutions for referrals. Shortly after MCA developed its draft messages, Mr Klaus Veil (an expert in HL7 who has been consulting for the CGPIS) visited MCA in Adelaide to discuss and review the draft.

As a result of these negotiations, the CGPIS has concentrated on those messages that are required for transmission from the General Practitioner's computing system to the Divisional computing system that aggregates information on diabetes care. Meanwhile MCA have concentrated on those messages that are required for transmission of clinical information between the GP and Specialists or Allied Health Professionals, as well as replies from those referrals back to the GP.

We omitted the following messages from the scope of our task, after detailed debate:

- Obstetric referral messages concerning women who are diabetic or who have developed gestational diabetes. We would regard these as a subset of an Obstetric referral group of messages.

- Messages for use in the emergency referral of seriously ill diabetic patients. We saw these as being a subset of a panel of Emergency referral messages.
- Care Planning messages. Again, we saw these as a specialised group of messages.

The following types of messages were included:

- Request from GP for appointment with specialist or AHP.
- Acknowledgement of receipt of request for appointment.
- Initial referral from GP for review by specialist.
- Initial referral from GP for review by an AHP.
- Response to GP from Specialist (after reviewing the patient).
- Response to GP from AHP (after reviewing the patient).
- Communication to GP after further contact between patient and specialist or AHP.
- Subsequent request from GP for review by specialist or AHP of a previously-referred patient.

METHODS.

From the outset, our plans had an educational focus as well as an investigational focus. The keystone of our approach was a meeting. As well as having invited participants, this meeting was advertised to a variety of potential participants in State Government, Federal Government, Teaching Hospitals, Academic Departments of both Medicine and Information Technology, a local Division of General Practice and through a cooperative network of software companies developing products for the health industry.

Prior to the meeting, the staff of MCA prepared vignettes and scenarios; loaded some of these clinical scenarios as dummy patients into a demonstration version of the MCARE *Diabetes* shared-care program; prepared teaching material; reviewed the HL7 component of the messaging requirements and produced some draft frameworks for the solutions; and used the GEHR web site to aid planning.

The meeting occupied two days. The first of these was didactic. It acted as an introduction to HL7 and GEHR for interested medical practitioners and IT developers, as well as having an expert stream for developers who wanted to

focus on technical issues of HL7, XML or GEHR. *See Appendix E.* Towards the end of the first day, a workshop session was devoted to defining the scope of the following day's work. This scope was reviewed with the larger group at the beginning of the second day.

The second day was devoted entirely to a workshop that made rapid progress in developing our recommended messaging solutions. Participants included software developers, a consumer representative, medical practitioners (one specialist and four GPs), a representative of the CGPIS, experts in HL7 and in GEHR, the general manager of a medical software company that supplies integration engines, the manager of a Divisional Diabetes project, a Diabetes Educator, a health software researcher and an academic researcher in the law and ethics of electronic communication in healthcare . *See Appendix F.*

Message content was partly defined by a workshop/"brainstorming" approach. In addition, however, a copy of an existing diabetes shared- care computing program, MCARE *Diabetes*, was used as a prompt or *aide memoire* to achieve completeness in the review of message content requirements. This program had some dummy patient records loaded in it and the record of one of these patients was reviewed *in toto* to check message content.

MESSAGE REQUIREMENTS ANALYSIS.

Discussion revolved around the generic requirements of messages; and around the specific requirements of each type of message and each type of recipient.

Message components were classified as "mandatory", "optional" or "reference".

Mandatory components are those which are regarded as a bare minimum. Without these, the referral would have no purpose or meaning, or might omit a component that is essential for patient safety

Optional components were distinguished from mandatory by the rules described above. Much as we regard many of them as "recommended" or "highly desirable" we acknowledge that some sending or receiving systems will provide only a minimum of functions. As these systems become more sophisticated, the broader set of components will become required *de facto*.

Reference components reflect the flexibility of the GEHR architecture. It is possible to append a great deal of detail to a GEHR referral. For example, one may send digitised images of the patient's retinas. While both sending and receiving systems may be able to cope with this very large message, transmission times across the Internet are likely to be impaired. Instead, one may be able to send a **Reference**. This takes the form of a "GEHRL" (the GEHR equivalent of a URL) which will point to an address in the sending system or another system, where the detailed information may be found if required. It also incorporates permission to access information from that address.

What are the reasons for sending the information?

The following were identified as reasons for communicating and as components of the communication.

The fact of the referral

- A request for care.
- To a practitioner (not always exactly specified when patient is being directed to a clinic).
- From a practitioner - invariably specified.

Limits of the referral

- Opinion only.
- Opinion and management.
- Definition of duration of care
- Defined duration
- Default duration (12 months)
- Indefinite duration

Degree of urgency

Reference to any discussion of this referral that may already have taken place.

The reason for the referral.

- One specific symptom or problem.¹
- A group of symptoms or problems.
- A request for general review of one or more problems, diseases or systems.

Text description.

Immunisation history.

Pathology and imaging results.

Current and occasional medications.

Therapeutic precautions²

- Allergies to environmental or ingested substances, e.g. peanuts, sulphites
- Allergies to environmental insults, e.g. bee stings
- Allergies to medications or to their colourings, congeners, vehicles, containers, etc.
- Known non-allergic reactions.
- Food sensitivities or preferences or beliefs.
- Patient resistance to certain medications, treatments or modes of treatment.
- Patient preference for certain modes of treatment - conventional or non-conventional.
- Religious beliefs relevant to choice of medicine or therapy.
- Transfusion problems.
- Reasons for having stopped previous medications.
- Reactions to topical agents or bandages and dressings

Problem List

A list of identified medical problems. Some of these may be current, some resolved, some in remission. It is unlikely that every single problem from the past will be regarded as germane to the referral. Different doctors may list the problems in different order and priority. Not all problems may have been formulated as a diagnosis. For example

¹ In some areas of application development, for example the CHIME development, the expression "issue" has been proposed as an improvement on the word "problem". We have chosen to use the word "problem" throughout.

² The term "therapeutic precautions" is preferred by the architects of GEHR in Australia, as a means of covering several matters that may not all be described as "allergies."

a problem in a referral letter may be "chest pain" and may reappear in subsequent communication as "oesophagitis" once a diagnosis has been assigned.

Lifestyle issues/Social History.

- Exercise habits
- Marital issues
- Employment issues.
- Smoking.
- Alcohol and other recreational drugs.
- Addiction/intravenous drug use.
- Promiscuous sexuality and/or male homosexuality.
- Bereavement and grief

Physical examination findings.

Family History.

Relevant Guardianship Issues.

Summary of Diabetic Reviews and contacts.

- Particularly extracts from an electronic record of diabetes reviews

Administration of appointments

- Receipt of appointment
- Cancellation of appointment.
- Failure to attend appointment.

Data entered by the patient.

Patient-entered data are an increasingly important component of medical care. Patients may monitor and record their own blood sugar (diabetes), their blood pressure (many illnesses), their peak flow (asthma), their weight (heart failure, dialysis), etc.

Such data require a validation point, at which point the clinician decides whether to incorporate them in the clinical record. They then require to be transmitted in a fashion that indicates their origin.

However, before patient-entered data are accepted into the clinical record, they may require editing or transformation. Thus, a blood sugar record may have a time series of readings taken over several months. This may be converted to a range of readings with an assigned time range, e.g. "3.8

- 17 mmol/l before breakfast". Weight is likely to be accepted into the record as presented. Blood Pressure readings may require annotation of the time of day, the patient's posture (lying or standing) and, if detailed, may require editing and compression in the same manner as blood sugar levels.

Other types of patient-entered data are records of administration of medication, diet diaries or diaries of symptoms. An assiduous patient with diabetes may be keeping all of these: a record of weight, blood pressure, blood sugar levels, indications of times and doses of insulin administration, a record of hypoglycaemia symptoms.

Increasingly, patients are asked to complete questionnaires. Within MCARE *Diabetes*, for example, there is a facility for patients to complete a Short Form 36, a Diabetes-related Depression score, a Diabetes Social Adaptation score and a satisfaction with service score. Such patient-entered data not only require validation before entry, but may also require a confidentiality message to be attached to them. For example, it is therapeutically important to have the patient's Depression Score recorded in their record: however, Satisfaction With Service scores will need to be anonymous and recorded for aggregation and audit only.

Results of diagnostic tests and imaging.

- Numeric
- Text
- Formatted or unformatted.
- Batteries of tests or atomic data from individual tests.
- Images.
- Time series.
- Graphs.

PRIVACY ISSUES

A plain English summary of the National Privacy Principles can be found at <http://www.privacy.gov.au/publications/fs2.html>

We did address these issues, but have not presented a complete or final recommendation because the component of the GEHR architecture that deals with this aspect of messaging has not yet reached its final form. What follows is a discussion and recommendation of our intended use of this architecture.

When entering data about a patient into a written record, it is uncommon to discuss the intended uses and controls, except during research trials. In normal use, the intended uses and controls of usage tend to remain unstated and implicit. Computer systems offer an opportunity for more explicit control of the use and distribution of data. Thus discussions of use and distribution of patient information may become an explicit part of the doctor-patient interview.

Existing clinical applications offer different degrees of control by the patient of data use. Many offer no more control than already exists in the written record paradigm. Some offer substantial degrees of control: for example, MCARE *Diabetes* offers 20 options to the patient. However, once transmission of data to another clinical system at another site has occurred (for example, to a Divisional computing system, such as CARDIAB) how does one maintain the controls on the use of that data that the patient originally requested?

The GEHR solution to this has been the adoption of a hierarchical set of access controls, which the patient can determine. This set of controls is then transmitted as part of the message archetype. We envisage that such a message would be included with each of the message archetypes that we have designed. At this stage, however, the GEHR archetype for confidentiality and access controls remains incomplete.

Once this archetype exists, it should be possible to adapt from it a code that would be used for the same purpose within HL7 messages.

OUTCOMES.

What has emerged from the meeting is an overlapping pair of message sets: one in GEHR archetype format and one in HL7 format.

It was clear that certain messages were of the administrative type that are well defined and managed by HL7. For these, an existing group of software products are already offering, or are about to offer, HL7 compatible message facilities.

On the other hand, messages with a substantially clinical content were better suited by the development of a GEHR messaging archetype, and these are represented in the second set of messages.

Even though there is limited overlap, it is likely that simultaneous use of both message sets will be required for the foreseeable future. Hybrid transmission of both is feasible.

We have presented the GEHR messaging archetypes first, followed by the HL7 specifications. The latter are presented in a much more detailed and complex fashion that reflects the exacting nature of HL7 message specifications - or perhaps reflects the relative simplicity of GEHR archetypes.

The GEHR messaging Archetype for Diabetes Referrals.*

Message Type	New Referral to Specialist	Recurrent referral to specialist	Response from specialist	Referral to AHP	Response from AHP
Request for care	M	M	Ref	M	Ref
Reason for referral	M	M	X	M	X
Text Description	M	M	M	M	M
Therapeutic Precautions	M	M	M	M	M
Problem List	O	O	O	O	O
Lifestyle	O	O	O	O	O
Social History	O	O	O	O	O
Guardianship	O	O	O	O	O
Family History	O	O	O	O	O
Diabetic Reviews	O	O	M	O	M
Scheduled Appointments	O	O	O	O	O
Examination Findings	O	O	O	O	O
Current Medications	M	M	M	M	M
Laboratory Results	O	O	O	O	O
Immunisations	O	O	M	O	O

It can be seen from this table that the **request for care** is mandatory in all referrals to either specialists or allied health professionals. In their response to

* M = Mandatory, O = Optional, Ref = Reference, X = Not Applicable, AHP = Allied Health Professional.

the GP, however, they can provide a reference to the GEHRL that points to the original referral from the GP.

Reason for referral is mandatory in referral requests but is not an essential component of responses. **Text descriptions** are mandatory in all cases.

We believe it is prudent to make **therapeutic precautions** mandatory in all communications because each professional has had the opportunity to identify a new precaution: applications will have to draw new precautions to the attention of the recipient of the communication.

While it would seem appropriate to include **problem lists**, descriptions of **lifestyle**, **social history**, **guardianship** and **family history** in all communications, many receiving and sending applications may not provide such features. In that event, these items would have to be included in the text description. We have chosen not to make these items mandatory: instead, we have indicated that they are optional, in preference to rendering many applications incapable of using this referral archetype.

Not all GP applications will be capable of transmitting an extract, or complete copy of specific **diabetes reviews**. On the other hand, the specialists and allied health professionals to whom patients have been sent for a diabetes review should have applications that can record and transmit a comprehensive record of the review of the diabetic patient. Since this is the purpose of the referral, we have indicated that it is mandatory in the response. One hopes that GPs will make use of the modularity and compatibility of the GEHR architecture by installing a diabetes review application - of which *MCAre Diabetes* is a forerunner. In that event it will be possible to transmit diabetes reviews in either direction: for the moment, however, it remains optional.

As before, we have not recommended that **scheduled appointments**, **examination findings**, or **laboratory results** should be mandatory - for fear of rendering less sophisticated applications incompatible with the archetype.

On the other hand, **current medications** are contained in a mandatory component; and we propose that the GP should not be kept in ignorance about any new **vaccinations** or vaccination recommendations given by the specialist.

Within GEHR, many of these components of the referral archetype have existing definitions. Thus therapeutic precautions, problem list, lifestyle, family history and current medication have defined **Persistent Transaction** archetypes. There are also **Organiser Archetypes** available for problem list, family history, current medication and therapeutic precautions. Components of lifestyle, such as alcohol, tobacco, drug use or exercise have **Subjective Content** archetype definitions. Assessment of the diabetic foot has both a subjective content archetype and an **Observation Content - complex** archetype. Both might appear in a structured diabetes review; only the latter might appear in examination findings.

HL7 message specifications for Diabetes Referrals.

In the following discussion, it is important to bear in mind the following definitions. The word "**Mandatory**" is used in the same sense as in the presentation of the GEHR referral archetype. As a result of our debate and discussion these components have been identified as being so essential that they cannot be dispensed with. On the other hand, the word "**Required**" is a convention within HL7.

In brief, HL7 messages are conceived of as being a response to a "trigger event". For example, "patient is referred" could be a trigger event. This initiates a message from an application; that message is referred to as an "unsolicited update." The unsolicited update requires an acknowledgement from a receiving application: this is purely an electronic acknowledgment and is not a response in any clinically meaningful way. Each message type (e.g. MSH or PID) is composed of segments (e.g. MSH 1, MSH 2) which, in turn, are composed of fields. The HL7 standard indicates which messages and segments are "Required".

In the tables that follow, the column labelled "Optionality" indicates whether a segment is "Required" or "Optional". Occasionally, a segment will be required only in certain circumstances: it will be labelled as "Conditional". Some segments are labelled "B" representing their retention only for purposes of backward compatibility with previous versions of the HL7 standard.

In the right hand column is displayed a synthesis of the two standards. "M" indicates that a message type or segment is "Mandatory" from the point of view of the requirements of GPCG Diabetes messaging. "R" represents the "Required" status of a message type or segment in the HL7 standard.

Other columns indicate the length of a segment, whether it is text or numeric, whether it can be repeated. There are also cross-references to tables and item numbers in the HL7 standard. Further abbreviations within the specification are taken from the HL7 Standard, which should be referred to.

The analysis of message requirements was nominally for the HL7 Version 2.3. However, we have also used the Version 2.3.1 Australian extension of HL7 2.3, which has been proposed for clinical referrals and discharge messages. If incorporated into the HL7 standard, this extension will enter a later version than 2.3. Thus, we have also had to examine the Standard for HL7 Version 2.4 in order to avoid creating any conflict. Wherever possible, footnotes will clarify these points.

Summary from GEHR Archetype Discussion

<i>Topic</i>	<i>HL7</i>	<i>New referral</i>	<i>Recurrent referral</i>	<i>Response to referral</i>	<i>AHP</i>	<i>Response to AHP referral</i>

³ The Clinical Reason for Referral represents the clinician's request and problem formulation. In RF1, the Request for Care, there may also be a coded Reason for Referral - such as Second Opinion, Provider Ordered, etc

⁴ PRB is in the NSW Referrals proposal, but not in Version 2.3

⁵ Not specifically represented in HL7

⁶ The PID segment includes marital status, religion, ethnicity

⁷ This does not appear to have been resolved by the NSW referral messaging specification

⁸ There is a need for a standard code for immunisations

⁹ A suitable code for patient-entered data does not exist

```

Fields

The following tables are adapted from the HL7 version 2.4 specification

Item	LEN	DT	OPT	RP/#	TBL#	ITEM #	Item Name	Comments	HL7 Required/ GPCG Mandatory
MSH							Message Header [Required for HL7]	HL7 V2.4 Ref: Section 2.16.9, page 2-113	R
MSH.1	1	ST	R			00001	Field Separator		R
MSH.2	4	ST	R			00002	Encoding Characters	^~&	R
MSH.3	180	HD ^{11*}	O		0361 ^{12**}	00003	Sending Application	<Sending application>	M
MSH.4	180	HD*	O		0362**	00004	Sending Facility	<Sending facility>	M
MSH.5	180	HD*	O		0361**	00005	Receiving Application	<Receiving application>	M
MSH.6	180	HD*	O		0362**	00006	Receiving Facility	<Receiving facility>	M
MSH.7	26	TS	R ¹³			00007	Date/Time Of Message	<Now>	R
MSH.8	40	ST	O			00008	Security ¹⁴	<i>May be used for access control?</i>	
MSH.9	13	CM	R		0076/ 0003	00009	Message Type	REF^12	R
MSH.10	20	ST	R			00010	Message Control ID	<Message control ID>	R
MSH.11	3	PT	R			00011	Processing ID	DITIP	R
MSH.12	60	VID	R		0104	00012	Version ID	2.3.1	R
MSH.13	15	NM	O			00013	Sequence Number	<i>Not recommended</i>	X
MSH.14	180	ST	O			00014	Continuation Pointer	<i>Not recommended</i>	X
MSH.15	2	ID	O		0155	00015	Accept Acknowledgment Type	AL	

¹¹ * In HL7 Version 2.3.1 the data type of MSH3-.6 is EI which includes <entity identifier (ST)> as the first component of four

¹² ** In HL7 Version 2.3.1 no table is associated with either of the fields MSH.3-.6, MSH.17 or MSH.20

¹³ In HL7 Version 2.3.1 MSH.7 is an optional field, but will be Required in 2.4,

¹⁴ Possibly adaptable for access controls - a GEHR confidentiality archetype in development - but note that it is a string

Item	LEN	DT	OPT	RP/#	TBL#	ITEM #	Item Name	Comments	HL7 Required/ GPCG Mandatory

RF1.9	26	TS	O			01145	Process Date	<Defined by the sending application>	
RF1.10	250	CE	O		0336	01228	Referral Reason	<i>Administrative "purpose" (not a clinical reason): SI PI OI WI²¹</i>	
RF1.11	30	EI	O	Y		01300	External Referral Identifier	<i>Difficult to conceive of a purpose</i>	X?
RF1.12²⁰	2	ST TX	O	Y		2	Clinical reason/Referral description	<i>Proposed</i>	X

¹⁵ In HL7 Version 2.3.1 MSH.21 is not included

¹⁶ * In HL7 Version 2.3.1 the length specified for RF1.1-.5 is 200 bytes

¹⁷ This requires a standard coding system for Allied Health Professionals

¹⁸ The HIC may wish to comment on legal aspects of the date from which the referral is effective

¹⁹ The HIC may wish to make this mandatory/required to suit Australia's legislated division between primary and specialist care

²⁰ This date to be created by the application by means of entering the referring doctor's preferred duration of referral

²¹ Workload transfer does not seem a valid reason in the Australian context of referrals from General Practice, There is no code for medicolegal.

²⁶ Medicare No and Vet Affairs No are the only numbers for which a standard number exists in Table 0363. We understand that the Privacy Commissioner is concerned about the use of these numbers as identifying numbers for the purposes of electronic transmissions, although they may be contained within the transmission.

²⁷ Note that the Australian standard differs here from the international standard; that the NSW 2.3.1 Referrals proposal recommends the use of PID.3; and that there is some disagreement within Australia's HL7 experts about the use of PID.19

³⁴ Yes/No seems an inadequate indicator of confidentiality. All clinical messages should be confidential (hence the default is 'Y') but further discussion is needed on how to indicate from whom the data are confidential, and to indicate access controls

³⁵ ** In HL7 version 2.3.1 the lengths specified for AL1.1-4 are, respectively, 4, 2, 60 and 2 bytes

³⁶ The existing allergen codes are inadequate for common clinical use

- Some Required data items are not accommodated
 - Social history
 - Needs more information
 - Could use OBR+OBX for some of these, but there is a concern about the overuse of these segments for many different purposes.
 - Family history
 - Consider the introduction of a new segment for Clinically Related Party
 - Could use OBR+OBX for some of these, but there is a concern about the overuse of these segments for many different purposes.
 - Scheduled appointments
 - IT 14-6-6 (a committee of Standards Australia)- is already considering this
 - Patient entered data
 - See Appendix H

⁷¹ * In HL7 Version 2.3.1 the lengths specified for PTH.2 and .5 are respectively, 80 and 80 bytes

HL7 Referral Acknowledgement Message (ACK)

Used to acknowledge receipt of a referral. This an electronic acknowledgement, not a clinical response.

Since the “P” status of the message will not change at this point, RF1.1-Referral status is not Mandatory and the standard acknowledgement message (ACK) will suffice.

Segments

<u>ACK^I12-I15^ACK I12</u>	<u>Referral Acknowledgement</u>	<u>Comments/ GPCG Topic(s)</u>	<u>HL7 Required/ GPCG Mandatory</u>	<u>HL7 V2.4 Ref</u>

PR1.1	4	SI	R			00391	Set ID – PR1	<n>	R

⁹⁹ might be used by applications that allow development of hierarchical problem list, e.g. renal failure might be shown to be secondary to diabetes

¹⁰⁰ Yes/No seems an inadequate indicator of confidentiality. All clinical messages should be confidential (hence the default is 'Y') but further discussion is needed on how to indicate from whom the data are confidential, and to indicate access controls

¹⁰¹ ** In HL7 version 2.3.1 the lengths specified for AL1.1-.4 are, respectively, 4, 2, 60 and 2 bytes

¹⁰² The existing allergen codes are inadequate for common clinical use

ORC.12	250*	XCN	O	Y		00226	Ordering Provider	<Prescriber's prescribing ID> ¹²⁵	X

¹¹⁸ Effectively mandatory if used to send the reason for referral

¹¹⁹ In HL7 Version 2.3.1 the length specified for NTE.4 is 60 bytes

¹²⁰ In HL7 Version 2.3.1 no table is associated with NTE.4

¹²¹ Table 0364 in HL7 Standard lists some comment types: this list should be expanded

¹²² This segment is recommended for transmitting clinical information in the NSW Version 2.3.1 proposal

¹²³ Has been recommended in the NSW 2.3.1 proposal for transmitting prescriber number; but see also ORC.12

¹²⁴ * In HL7 Version 2.3.1 the lengths specified for ORC.10-.12, .14 and .16-.20 are, respectively, 120, 120, 120, 40, 200, 60, 60, 120 and 40 bytes

Item	LEN	DT	OPT	RP/#	TBL#	ITEM #	Item Name	Comments	H17 Required/ GPCG Mandatory

Note: The abstract message definitions for both the REF and RRI include the patient visit segments (PV1 and PV2). The PV1 and PV2 segments appear in the REF as an optional grouping to specify the visit or encounter that **generated** the referral. The PV1 and PV2 **should not** be used to provide suggested information for a future encounter or visit generated by the referral.

The PV1 and PV2 are also included in the RRI message definition. It should be noted that these segments do not merely mirror the segments in the originating REF message. Rather, they may contain information regarding the visit or encounter that **resulted** from the referral.

APPENDIX D - National Privacy Principles

(Plain English summary reproduced from the Australian Privacy Commissioner's Web-site at <http://www.privacy.gov.au/publications/fs2.html>)

Summary only: not the full version of the NPPs

NPP 1 – Collection

Collection of personal information must be fair, lawful and not intrusive. A person must be told the organisation's name, the purpose of collection, that the person can get access to their personal information and what happens if the person does not give the information.

NPP 2 – Use & Disclosure

An organisation should only use or disclose information for the purpose it was collected unless the person has consented, or the secondary purpose is related to the primary purpose and a person would reasonably expect such use or disclosure, or the use is for direct marketing in specified circumstances, or in circumstances related to public interest such as law enforcement and public or individual health and safety.

NPP 3 – Data Quality

An organisation must take reasonable steps to make sure that the personal information it collects, uses or discloses is accurate, complete and up-to date.

NPP 4 – Data Security

An organisation must take reasonable steps to protect the personal information it holds from misuse and loss and from unauthorised access modification or disclosure.

NPP 5 – Openness

An organisation must have a policy document outlining its information handling practices and make this available to anyone who asks.

NPP 6 – Access & Correction

Generally speaking, an organisation must give an individual access to personal information it holds about that individual on request.

NPP 7 – Identifiers

Generally speaking an organisation must not adopt, use or disclose, an identifier that has been assigned by a Commonwealth government 'agency'.

NPP 8 – Anonymity

Organisations must give people the option to interact anonymously whenever it is lawful and practicable to do.

NPP 9 – Transborder Data Flows

An organisation can only transfer personal information to a recipient in a foreign country in circumstances where the information will have appropriate protection.

NPP 10 – Sensitive Information

An organisation must not collect sensitive information unless the individual has consented, it is Mandatory by law – or in other special specified circumstances (for example, relating to health services provision and individual or public health or safety).

APPENDIX E -

Programme of meeting.

Day 1, Monday 19th March

8.45am Convening, registering

9.15 Introduction and Overview of the meeting

Stephen Dippy

(Medical Communications Associates)

Messages, Records and Information Models

- a brief overview

Dr Peter Schloeffel

(Medical Communications Associates)

9.45 Introduction and Overview of HL7

Brenton Norman

(Medical Communications Associates)

- Anatomy of an HL7 Message
- A sample HL7message
- How HL7 messaging standards are developed in Australia and the USA
- Commonly seen errors
- Sample errors for discussion
- How the Standards System has responded to some errors
- HL7 RIM
- HL7 and XML

10.45-11.00 MORNING TEA

11.00 Good Electronic Health Record

Sam Heard

Ocean Informatics; Flinders University (Darwin).

Tom Beale

Ocean Informatics; Deep Thought Informatics.

- Introduction and Overview
- History of GEHR
- Transactions
- GEHR archetypes
- GEHR vs RIM or GEHR plus RIM?
- GEHR and XML

12.00-1.00pm LUNCH

APPENDIX E (Continued)

1.00pm Joint Workshop - two "cases" for discussion

Wilton Braund

MCA and Flinders University

Brenton Norman

- A Histopathology Sample from Theatre
- A Diabetes Message

Brief illustrative discussions to highlight the approach taken with HL7 and/or GEHR to these two very different challenges. Comments and discussion from all participants - with GEHR reflections from Sam Heard and Tom Beale.

1.45pm DIVISION INTO TWO WORKSHOP STREAMS

TECHNICAL

1.50 Interface vs hardcoding

Parsing engines

Heath Frankel

MCA

Interfaces between the GEHR kernel and applications, databases or communications

Tom Beale

3.00 AFTERNOON TEA

3.10 Practical problems encountered in divisional projects.

Leading to a general Question and Answer session including HL7, XML and GEHR.

Heath Frankel, Brenton Norman, Tom Beale

4.45 Summary and conclusion.

MEDICAL

Problems of diabetes management, documentation and referral. A model of chronic disease management.

Wilton Braund

A Divisional Diabetes Project

Challenges of a small diabetes information project

Brenton Norman

AFTERNOON TEA

GPCG Messages

Sam Heard

Setting out a format for working out the messaging solutions for the GPCG Diabetes Project.

Three sample problems.

John Guy, Wilton Braund - and all interested technical or medical participants.

APPENDIX E (Continued)

List of Participants

Ask, Alexander *Flinders University Health Research Institute*
 Beale, Thomas *Deep Thought Informatics*
 Braund, Wilton *Flinders Medical Centre and MCA*
 Charlton, Peter *Health Insurance Commission*
 Dahlin, Tony *Integra Medical Imaging*
 Dippy, Stephen *Medical Communications Associates*
 Frankel, Heath *Medical Communications Associates*
 Guy, John *Southern Division of General Practice*
 Heard, Sam *Flinders University Medical School, Darwin Campus*
 Lewis, Bryn *Latrobe University School of Public Health*
 Mulligan, Ea *Flinders University Law School*
 Norman, Brenton *Medical Communications Associates*
 Schloeffel, Peter *Medical Communications Associates*
 Sickles, David *Consumer Representative*
 Socorro, Cue *Health Insurance Commission*
 Taggart, Jane *Centre for General Practice Integration Studies, Univ of NSW*
 Unterweger, Zlatko *Flinders Medical Centre*
 Venables, Paul *Power Solutions*
 Whitfield, Graeme *Health Insurance Commission*

APPENDIX F - Participants in the message archetype workshop, with details of their qualifications.

Beale, Thomas *Deep Thought Informatics*

Software designer and developer, involved in GEHR research and development for 12 years.

Braund, Wilton *Flinders Medical Centre and MCA*

Diabetes Physician; Director of Clinical Training at FMC

Frankel, Heath *Medical Communications Associates*

Software Developer; projects include a Coordinated Care application, MCAre Diabetes, several HL7 projects

Guy, John *Southern Division of General Practice*

Director of projects and training in a 60-doctor Diabetes Interest Group

Heard, Sam *Flinders University Medical School, Darwin Campus*

General Practitioner; Senior Lecturer; involved in GEHR research and development for 12 years.

Lewis, Bryn *Latrobe University School of Public Health*

IT Communications Researcher

Mulligan, Ea *Flinders University Law School*

General Practitioner; Medical Administrator; Researcher in Ethics, Privacy and Law

Norman, Brenton *Medical Communications Associates*

Software Developer; projects include General Practice Divisional Clinical Applications, MCAre Diabetes, several HL7 projects

Schloeffel, Peter *Medical Communications Associates*

General Practitioner; Clinical Computing Consultant and Activist

Sickles, David *Consumer Representative*

Retired computing developer. Developed *MCAre Diabetes*.

Taggart, Jane *Centre for General Practice Integration Studies, Univ of NSW*

Representing another GPCG Project in HL7 messaging.

Venables, Paul *Power Solutions*

Managing Director.

APPENDIX G - A list of documents and references used to support the meeting.

NDOQRIN minimum data set for diabetes (Diabetes Guideline Checklist Dataset)

HL7 versions 2.3 and 2.4

National Health Data Dictionary Version 9 (2000) Australian Institute of Health and Welfare

National Privacy Principles - Plain English Summary.

HL7 Reference Information Model

NSW Health / Standards Australia Referral Message Proposal Version 0.34

APPENDIX H - Data entered by the patient: Issues to be considered for a coding system in HL7

Blood glucose, Blood Pressure, Heart Rate, Peak Flow, Weight, Fluid Intake, Fluid Output, Foetal Heart Rate, Uterine Contractions, Bowel Charts, Menstrual Charts, Mucus Scores, Temperature

Clinician validation

Clinician's estimate of reliability.

Type of Equipment used

Automatically sensed data (for example an automatic record of BP as performed in 24 hour monitoring systems; or a electrocardiographic trace)

Patient processed data (for example, blood pressure readings obtained manually by the patient without use of an automated device)

Transformation of data.

Not transformed.

Transformed by patient or clinician.

Automated transformation.

Statistical technique (e.g. cusum, geometric mean)

Symptom record: narrative record; coded record; analogue scores

Symptom linked to an event. e.g. symptoms of a hypo present or absent in association with a low blood sugar; patient symptom records associated with automated heart monitor records.

Position linked to an event. e.g. blood pressure supine or standing

Questionnaire scores.

Self-administered

Associated confidentiality messages.

ACKNOWLEDGEMENTS

Special acknowledgment is made to the following people and institutions:

- Ms Rosemary Hilton of MCA for organising and managing the meeting.
- Mr Brenton Norman and Mr Heath Frankel of MCA for developing the meeting.
- The staff of Flinders Private Hospital (and the Adelaide Community Hospital Alliance) for having hosted our meeting.
- All of the participants in the archetype development workshop – see Appendix F
- Mr Brenton Norman for his major contribution to development of the HL7 message formats.
